SUPERSEDES: None

66000A DC Power Supply System Mainframe**Serial Numbers:** 3138A00122 / 3317A00505**Unit resets when in serial link mode****To Be Performed By:** Agilent-Qualified Personnel**Parts Required:** PRGMD-ROM P/N 66000-80009**Situation:**

When two 66000A mainframes are connected for serial link communication, commands to one mainframe may cause the second to reset to the turn on state.

Solution/Action:

A new ROM revision eliminates this problem. Disassemble the mainframe to gain access to the main board. Replace the plug-in ROM, U51 revision A.00.02, with the new revision A.00.03.

Install a Power Supply Module and program the supply to insure the mainframe passes self test and accepts programming commands (either from the 66001A keyboard or via the GPIB).

DATE: 20 February 1993
