**Situation:**

The new STD Signal Circuit (E6393-66539) is used from the E6393B with serial number JP1KJ00172. By using this new STD Signal Circuit and based on measured performance of field returns, the calibration cycle of the E6393B with serial number JP1KJ00172 and above is increased to 24 months.

**Solution/Action:**

1. If the customer who has the E6393A requires 24 months calibration cycle, suggest purchasing E6393A to E6393B upgrade kit. Because the upgrade kit contains new STD Signal Circuit, we can recommend 24 months calibration cycle after A to B upgrade. The model number for the upgrade kit is E6393U #101.
2. If the customer who has the E6393B with serial number JP1KJ00171 and below requires 24 months calibration cycle, modification to the new STD Signal Circuit, E6393-66539, is appropriate solution for the customer. Typical STD Signal Circuit modification labor needs 1.5 hours.
