

N4373B-01A

Modification Recommended Service Note

Supersedes:
N4373B-01

N4373B 67 GHz Lightwave Component Analyzer

Serial Numbers:

DE47400101, DE47400102, DE47400109 DE47400110

An improved calibration procedure is recommended for re-adjustments and verification of N4373B/C/D LCAs. **Customer needs to approve re-adjustment**

Parts Required:

NONE

ADDITIONAL INFORMATION:

Situation:

- After re-adjustment, the “relative frequency response uncertainty” measurement value in the “Production Test Data” report could be improved
- The improvement is effective in the range 40GHz to 50GHz. The “relative frequency response uncertainty” is specified across the range of 0.05GHz to 65GHz. The specification limits are detailed for 5 sub-ranges. The particular measurement value in the range 20GHz to 50GHz could be improved
- The re-adjusted instruments will benefit from a further reduced uncertainty for E/O and O/E measurements in the range of 40GHz to 50GHz.
- All Specifications remain unchanged

Solution/Action:

- “As received” calibration will be performed
- **Double check if re-adjustment already performed**
(if adjustment files on system dated after Jan 2018 no action is required)
- Re-adjustment is done as automatically ordered
- “As completed” calibration will be performed
- Keysight will cover the additional cost for the re-adjustment as part of a regular calibration
