Situation:

The U8488A Power sensors with the serial numbers listed will capture a 0.6dB offset in power measurements when it is used under the 2 conditions below:

a) whenever there's a change in the sensor's measurement mode (between NORM & FAST measurement mode) without re-performing sensor calibration afterwards.

 And / or

b) when it is used with the Network Analyzers below:

Solution/Action:

Verify that your instrument(s) corresponds to the above model and serial numbers.

This issue can be fixed by upgrading the power sensor Firmware to version A.02.05 and above.

Please refer to this link below for the Firmware upgrade or you can find it in Keysight Technologies Website:
